

CANADIAN SPACE COMPANIES PARTNER TO BRING NEW DATA TO THE EARTH OBSERVATION MARKET

June 30, 2021

Edmonton, Alberta, Canada: Wyvern Inc. has signed an agreement with SkyWatch, headquartered in Waterloo, Ontario, Canada, to provide data management services starting mid-2022. Together, the two companies are getting high-quality, affordable hyperspectral imagery to the Earth observation data consumers that need it.

Wyvern has signed an agreement to use SkyWatch's data management capabilities for future missions. SkyWatch's TerraStream platform will provide data management, ordering, and delivery services for Wyvern's imagery starting next year with Wyvern's first generation satellite launch.

"Using SkyWatch's platforms will ensure our customers can order and access the data they need while allowing Wyvern to focus on building our core technology," says Chris Robson, CEO at Wyvern. "Partnering with a Canadian-based company for these services is special as we work together to build and retain the workforce needed to enrich the Canadian space sector."

###

About Wyvern

Edmonton-based space company Wyvern was created to provide actionable intelligence that will enable a sustainable future for humanity. Wyvern's cutting-edge unfolding camera technology will make high-quality hyperspectral imagery from satellites accessible and affordable like never before, unlocking applications in new markets for the very first time. The company is proud to be carving a path for the space industry in Alberta.

About SkyWatch

SkyWatch is on a mission to make Earth Observation data accessible to the world. Hundreds of trillions of pixels of our planet are captured from space every day. Utilizing our past experience in space data aggregation software, our team is building the infrastructure to connect satellite data operators and application developers. EarthCache is the simplest way to get satellite data for an application. TerraStream is an integrated data management solution for satellite data operators that handles all data-related operations from ground station to customers.
